

How to Read a QRCode with your camera phone to open the web page

A QRCode is a kind of bar code used to go to a specific web page. The steps are very similar on most phones or tablets.

• Android (Standard Camera):

- Open your camera app.
- Point it directly at the QR code.
- Ensure the code is centered and in focus.
- A link will appear; tap it to open the URL.
- *If it doesn't work:* Go to camera **Settings** (gear icon) and toggle on **Scan QR Codes** or **Google Lens**.

• iPhone (iOS):

- Open the default **Camera** app.
 - Select the rear-facing camera.
 - Position the phone to view the QR code.
 - Tap the notification banner that pops up to open the link.
-

Note: The link to a web page may appear at the top of the screen, at the bottom of the screen or just below the QRCode usually in yellow text.
